

Ramy AlRammahi

Infrastructure Engineer

Ann Arbor, MI | alrammahiramy@gmail.com | (734) 657-7476

SUMMARY

Platform engineer specializing in Kubernetes, GitOps, and Terraform automation across multi-tenant environments. Experienced in reusable platform tooling and serving as the technical interface for application teams who consume it including onboarding, documentation, and training delivery.

EXPERIENCE

Domino's | Ann Arbor, MI

Platform Engineer II - Cloud Engineering

Feb 2026 - Present

- Authored and merged open-source contributions to the HashiCorp Terraform AzureRM provider, adding support for previously unavailable resource configurations and unblocking production infrastructure deployments.
- Led redesign and migration of connectivity services supporting 1,400+ stores, replacing retiring on-prem infrastructure with secure, isolated, multi-region Azure architecture leveraging Azure Container Apps.
- Built complex Terraform modules to enhance usability and ensure consistency across cloud infrastructure.
- Drove platform modernization initiatives using automation including Kubernetes upgrades and lifecycle maintenance, third-party component audits, and security-focused DevOps improvements across the platform.
- Delivered Kubernetes enablement training to developers covering workload reliability and developing applications for Kubernetes

Platform Engineer I – Cloud Engineering

Jun 2025 - Mar 2026

- Served on a four-person platform engineering team responsible for lifecycle, reliability, security, and support across 20+ multi-tenant AKS clusters, 100+ applications, and 200+ code repositories.
- Architected and automated RBAC provisioning processes for cloud infrastructure, improving access workflows across engineering teams while enforcing least-privilege and security best practices.
- Built Grafana dashboards and maintained Prometheus platform stability providing deep observability into infrastructure and application workloads across the AKS environment.
- Participated in production on-call rotations and led root cause analysis investigations and implemented mitigations
- Created automations using Ansible to support lifecycle management of bastion VMs

Technology Rotation Program – SWE, ML, CyberSec

Jun 2023 - Jun 2025

- Completed a two-year rotational technology program spanning Software Engineering, BI/ML Engineering, Information Security, and Cloud Infrastructure, gaining experience across the full software and platform lifecycle.
- Designed and implemented a highly available HashiCorp Vault architecture on AKS, enabling cross-region failover, improved resiliency, and secure secrets management for enterprise workloads.
- Built and delivered a production-ready LLM chatbot experience in tight collaboration with Microsoft engineers, leveraging Python, PromptFlow SDK, Azure AI Foundry, and other LLM orchestration tools to deliver an innovative new ordering experience for customers.
- Developed Power BI dashboards and implemented machine learning models to surface actionable insights and enable store operators to make data-driven operational decisions.
- Led OSINT investigations and designed CI/CD security architecture with a DevSecOps-first approach.
- Gave an interactive training session to 200+ developers around Cybersecurity principles to fulfill PCI-compliance requirements.

NOTABLE PROJECTS

PodScope | [Link](#) | *Kubernetes, Go, TypeScript, Python, BPF/PCAP*

- Created a publicly available Kubernetes diagnostics tool that deploys ephemeral debug containers across selected pods and routes traffic through a temporary aggregation hub without privileged node access or persistent cluster agents.
- Implemented live packet decoding, BPF filtering, and consolidated PCAP export in GO. Validated the tool across production while investigating latency, packet loss, connection resets, DNS, and TLS behavior.

EDUCATION & CERTIFICATION

Oakland University - B.S., Management Information Systems, Information Security Specialization

May 2023

School of Business Administration Honors | Microsoft Certified: Azure Fundamentals (AZ-900), Dec 2024

SKILLS

Platform: Azure, AKS, Azure Container Apps, Azure App Gateway, Azure API Management, Kubernetes, Terraform, Helm, FluxCD, GitOps, Azure Foundry

Observability: Azure Monitor, Grafana, Prometheus, Alertmanager, OpenTelemetry, Splunk, JMeter

DevOps: GH Actions, Git, Python, Bash, SQL, Vault, Azure Key Vault, Entra ID, Kyverno, PCI, Ansible

Networking & Engineering: Palo Alto, Apache, Wireshark, Linux, Python, Go, BASH, Codex, Claude Code
