

Ramy AlRammahi

Platform Engineer

Ann Arbor, MI | ramymahi.dev | alrammahiramy@gmail.com | (734) 657-7476

SUMMARY

Platform and DevOps engineer specializing in Kubernetes, DevOps, and Terraform automation across multi-tenant environments. Experienced in reusable platform tooling and championing application teams who consume it including onboarding, documentation, and training delivery.

EXPERIENCE

Domino's | Ann Arbor, MI

Platform Engineer II – DevOps & Cloud Engineering

June 2024 - Present

- Authored upstream contributions to the HashiCorp Terraform AzureRM provider, enabling previously unsupported resource configurations and unblocking production deployments.
- Designed and built a secure multi-region proxy platform supporting 1,400+ stores, including Apache configuration, Terraform infrastructure, Docker images, and CI/CD pipelines with automated testing.
- Managed Flux GitOps across 200+ repos, 500+ HelmReleases, and 290 Kustomizations; diagnosed controller concurrency saturation and tuned concurrency and API QPS/burst limits to reduce reconciliation lag.
- Provisioned and maintained production Azure Application Gateways and Akamai properties; led modernization of the Terraform App Gateway module and built an agent that converts legacy IaC into the new templates, accelerating team migrations.
- Developed a Kubernetes troubleshooting agent with environment-specific skills adopted across the platform team; delivered technical presentations to 500+ developers on Kubernetes scaling strategies and probe configuration.
- Recovered a production Vault Raft cluster from snapshots following a node failure involving a stale TLS keyring; strengthened restore automation and Autopilot configuration to improve recovery reliability.
- Deployed a highly available, region-redundant Grafana platform with disaster recovery measures and developed Grafana and Azure Monitor dashboards to accelerate incident triage across infrastructure and application dependencies.
- Built and maintained GitHub Actions CI/CD pipelines for container builds, security scanning, and Helm/Flux-based deployments with automated configuration testing; automated Linux VM access and lifecycle management with Ansible.

Software Engineer I – Agentic Ordering

Jun 2023 - Jun 2024

- Delivered a production-ready Agentic ordering experience in tight collaboration with Microsoft, leveraging Python, PromptFlow, Azure AI Foundry, Presidio, and other LLM orchestration tools to deliver an innovative new ordering experience for customers.
- Designed a semi-deterministic estimator that calculated appropriate order quantities from user-provided factors, feeding structured constraints into the recommendation flow to reduce hallucinated or mismatched suggestions.
- Built the LLM-driven recommendation engine, injecting active deals, coupons, and nearest-store menu availability as context so suggestions were accurate and purchasable.
- Developed an LLM evaluation framework using synthetic test data and multiple LLM-based classifiers to assess output quality and validate behavioral changes resulting from system and prompt updates.

NOTABLE PROJECTS

PodScope | [Github](#) | *Kubernetes, Go, TypeScript, Python, BPF/PCAP*

- Created a publicly available Kubernetes diagnostics tool that deploys ephemeral debug containers across selected pods and routes traffic through a temporary aggregation hub without privileged node access or persistent cluster agents.
- Implemented live packet decoding, BPF filtering, and consolidated PCAP export in Go. Implemented the tool across production workloads to assist in investigating latency, packet loss, connection resets, DNS, and TLS behavior.

EDUCATION & CERTIFICATION

Oakland University - B.S., Management Information Systems, Information Security Specialization

May 2023

School of Business Administration Honors | Microsoft Certified: Azure Fundamentals (AZ-900), Dec 2024

SKILLS

Platform: Azure, AKS, Kubernetes, Helm, FluxCD, Argo Rollouts, Terraform, Azure App Gateway, API Management, Akamai, Azure Container Apps, Azure AI Foundry

Observability: Grafana, Prometheus, Alertmanager, Azure Monitor, OpenTelemetry, Splunk, JMeter

Security & Access: HashiCorp Vault, Azure Key Vault, Entra ID, Kyverno, RBAC, PCI compliance

DevOps & Automation: GitHub Actions, Ansible, Artifactory, ACR, Docker, Bash, Python, Go, SQL

Networking: Palo Alto, Apache, Wireshark, Linux

AI Tooling: Claude Code, Codex, PromptFlow, LLM evaluation
